2.3: Mineral Groups: Minerals are grouped according to the anion part of their formula, with some common types being oxides, sulphides, sulphates, halides, carbonates, phosphates, silicates, and native minerals. 2.4: Silicate Minerals: Silicate minerals are, by far, the most important minerals in Earth's crust.

Chapter 2 Summary | Physical Geology

Chapter 2 Minerals 2.3 Mineral Groups Most minerals are made up of a cation (a positively charged ion) or several cations, plus an anion (a negatively charged ion (e.g., S 2-)) or an anion complex (e.g., SO 42-). For example, in the mineral hematite (Fe 2 O 3), the cation is Fe 3+ (iron)
