On top of harnessing the substances we consume, the digestive system is also responsible for excreting waste from the body. Metabolism is the process that your body uses to convert the food and drink that you consume into energy. The digestive system and body metabolism work together to ensure that your body is consistently and efficiently energized to carry out normal day-to-day tasks, as well as background bodily functions. Organs in Digestive System and Their Functions

The Digestive System and Body Metabolism | New Health Advisor

The digestive system and the metabolism work together to ensure the body is always supplied with enough energy to operate background bodily functions and perform daily tasks, explains New Health Advisor. Since metabolism is a very complicated process, many people choose to oversimplify it and think in terms of how easily you can gain or lose weight.

Digestive System and Metabolism Trivia and Quizzes

The digestive system converts the foods we eat into their simplest forms, like glucose (sugars), amino acids (that make up protein) or fatty acids (that make up fats). The broken-down food is then absorbed into the bloodstream from the small intestine and the nutrients are carried to each cell in the body.

Digestive system explained - Better Health Channel

After we eat food, the digestive system uses enzymes to: break proteins down into amino acids; turn fats into fatty acids; turn carbohydrates into simple sugars (for example, glucose) The body can use sugar, amino acids, and fatty acids as energy sources when needed. These compounds are absorbed into the blood, which carries them to the cells.

Metabolism (for Teens) - Nemours KidsHealth

Our body's metabolism is controlled by a group of digestive enzymes, which are secreted by various organs of the digestive system. These enzymes aid in proper digestion of food. Enzymatic digestion begins in the mouth and extends to the intestine, where it gets converted to simpler particles and are then excreted by our body.

A List of Digestive Enzymes and Their Functions - Bodytomy

Our genes are the blueprints for the proteins in our body, and our proteins are responsible for the digestion and metabolism of our food. Sometimes, a faulty gene means we produce a protein that is ineffective in dealing with our food, resulting in a metabolic disorder.
