The focus of this gastrointestinal anatomy and physiology course is to teach you about the structures and functions of the gastrointestinal system and its accessory organs. The anatomical structures of the gastrointestinal system work together to achieve three major goals.

Gastrointestinal Anatomy and Physiology - RN.com

The focus of this gastrointestinal anatomy and physiology course is to teach you about the structures and functions of the gastrointestinal system and its accessory organs. The anatomical structures of the gastrointestinal system work together to achieve three major goals. These goals are to digest, transport, and absorb nutrients. Understanding the

Gastrointestinal Anatomy and Physiology - lms.rn.com

The gastrointestinal tract is essentially a tube that extends from the mouth to the anus. It has generally the same structure throughout. There is a hollow portion of the tube known as the lumen, a muscular layer in the middle, and a layer of epithelial cells. These layers are responsible for maintaining the mucosal integrity of the tract.

The Gastrointestinal System - rn

The alimentary canal is a hollow muscular tube that begins in the mouth and extends to the anus. It also includes the pharynx, esophagus, stomach, small intestine, and the large intestine. On the other hand the accessory organs are the liver, biliary duct system, and the pancreas.

Endocrine System Anatomy and Physiology The major endocrine organs of the body include the pituitary, thyroid, parathyroid, adrenal, pineal and thymus glands, the pancreas, and the gonads. The regulatory functions of the nervous and endocrine systems are similar in some aspects, but differ in such ways. Skeletal System Anatomy and Physiology

Anatomy and Physiology Study Guides and Reviewer - Nurseslabs

The gastrointestinal tract or the alimentary canal as some people call it has lots of different parts. It ' s basically a long tubing system and its main purpose is the physical breakdown of food into nutrients and then the absorption of those nutrients vitamin water and electrolytes. Not everything that we eat gets absorbed, so there are always some waste and these wastes are eliminated through feces.
