Finance is the answer to that problem. If you think of the economy as a body, finance would be the heart, pumping money from pension funds in Iowa to construction sites in Madrid. In economic terms, the financial system is responsible for a lot of the world's resource allocation. It decides which investments get funded and which ones do not.

In the next four lectures, we build intuition by viewing banking as a payments system, in which every participant faces a daily settlement constraint (a survival constraint). From this point of view, the wholesale money market plays a key role by allowing banks to relax the discipline of a binding settlement constraint, delaying final payment by putting settlement off until a later date.

~~Financial System Definition~~

Bank capital requirements are the focus of contentious and heated debates. Since they limit banks' ability to take on risk and leverage, owners and managers almost always argue for lowering them. To reduce the likelihood of using public funds for further bailouts, both libertarians and progressives argue strenuously that they should be higher.
